🎓 EDUCATION

Gokaraju Rangaraju Institute of Engineering and Technology,
B.tech(CSE-Computer Science and Engineering)

- Year of Passing: **2024–2028**
- CGPA: **9.32**

Sri Chaitanya Junior College,
Intermediate

- (95.1%)

Holy Cross High School, Schooling

- (10 GPA)

🧠 SKILLS

Languages: Java, C

Backend: Spring Boot, REST APIs, Hibernate, JPA, JDBC

Frontend: HTML, CSS, JavaScript, React.js

Databases: PostgreSQL, MongoDB

Tools: Git, GitHub, VS Code, Postman

Deployment & Hosting: GitHub Pages, Netlify, Vercel

Data Structures & Algorithms: Data Structures and Algorithms (Arrays, Strings, HashMaps, Linked Lists, Stacks, Queues, Trees, Graphs – DFS, BFS), Object-Oriented Programming, DBMS

Computer Science undergraduate with expertise in Java, Spring Boot, REST APIs, and React.js, with experience building full-stack applications and backend systems. Seeking a Software Development Internship to apply my knowledge of data structures, algorithms, and scalable system design while contributing to impactful software solutions.

{ } CODING PROFILES

LeetCode 🔗

- Problems solved : **178+**
- Rating : **1422**

CodeChef 🔗

- Problems solved : **60+**
- Rating : **1202**

📁 PROJECTS

Medicine Availability Finder — Full Stack Web Application

Tech Stack: Java, Spring Boot, React.js, MongoDB, REST APIs, JWT Authentication

- Developed a **location-based web application** that helps users find nearby pharmacies with the required medicine in stock.
- Implemented **medicine search functionality** and **pharmacy inventory management** through a store owner dashboard.
- Integrated **geolocation-based search** to display pharmacies within a specified radius and show medicine availability.
- Built **RESTful APIs using Spring Boot** to handle medicine data, pharmacy inventory, and user requests efficiently.
- Implemented **real-time stock updates** and **secure authentication using JWT** to manage access for pharmacy owners.

SmartBudget – Intelligent Product Recommendation System | Full Stack Web Application

Tech Stack: Java, Spring Boot, HTML, CSS, JavaScript, REST APIs, Product Ranking Algorithm

- Built a **product recommendation platform** that suggests the best products within a user's budget using a custom scoring algorithm.
- Designed a **ranking algorithm** combining Trust Score, Value Score, and Final Score to evaluate product reliability and price efficiency.
- Developed **REST APIs using Spring Boot** to fetch and process product datasets from multiple e-commerce sources.
- Implemented **wishlist, product comparison, and budget filtering features** to improve user decision-making.
- Built dynamic UI components to display product rankings, highlight top recommendations, and compare features across products.
- Optimized data processing to handle **large product datasets** and **deliver ranked results efficiently**.

Online Trading and Stock Rating System, Full-Stack Trading Simulation with Market-Based Stock Rating Algorithm

Tech Stack: Java, REST APIs, Hibernate, PostgreSQL, SQL, React.js

- Built a full-stack trading simulation platform supporting **buy/sell operations**, portfolio tracking, and transaction history.
- Designed a **rule-based stock rating algorithm (1–5 scale)** evaluating **25+ stocks** using price movement, volume trends, and overall market conditions.
- Processed **100+ simulated trading transactions** with real-time **profit-loss calculation**.
- Designed relational database schemas and wrote **10+ optimized SQL queries** using joins, subqueries, and indexing.
- Applied **object-oriented programming principles** to build modular, maintainable, and scalable backend logic
